RESULT 50
US-09-880-748-1056
; Sequence 1056, Application US/09880748
; Publication No. US2003005937A1
; GENERAL INFORMATION:
; APPLICANT: Ruben et al.
; TITLE OF INVENTION: Antibodies that Immunospecifically Bind BLYS
; FILE REFERENCE: PFS23
; CURRENT APPLICATION NUMBER: US/09/880,748
; PRIOR FILING DATE: 2001-06-15
; PRIOR APPLICATION NUMBER: 60/212,210
; PRIOR FILING DATE: 2000-06-15
; PRIOR APPLICATION NUMBER: 60/240,816
; PRIOR FILING DATE: 2000-10-17
; PRIOR APPLICATION NUMBER: 60/276,248
; PRIOR FILING DATE: 2001-03-16
; PRIOR APPLICATION NUMBER: 60/277,379
; PRIOR FILING DATE: 2001-03-21
; PRIOR APPLICATION NUMBER: 60/293,499
; PRIOR FILING DATE: 2001-05-25
; NUMBER OF SEQ ID NOS: 3239
; SOFTWARE: PatentIn Ver. 2.0

XX Antibody composition for treating ganglioside GD3 associated disease e.g.  
 PT cancer, comprises genetically modified antibody molecule, which  
 PT specifically binds to ganglioside GD3 and has N-glycoside-binding sugar  
 PT chain in its Fc domain.  
 XX  
 XX Claim 9; SEQ ID NO 17; 124pp; Japanese.  
 PS  
 XX The invention describes an antibody composition (I), comprising a  
 CC genetically modified antibody molecule which specifically binds to  
 CC ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its  
 CC Fc domain, where the N-glycoside-binding complex sugar chain is a sugar  
 CC chain having no fucose attached to N-acetylglucosamine at the reducing  
 CC end of the sugar chain. Also described are: a transformant (II) capable  
 CC of producing (II), obtained by introducing DNA that encodes the antibody  
 CC molecule which specifically binds with ganglioside GD3, to a host cell;  
 CC producing (II), involving cultivating (I) in a culture medium, such that  
 CC C1 (sic) is produced and accumulated in the culture, extracting and  
 CC purifying C1 from the culture medium; a pharmaceutical (III) containing  
 CC C1 as an active ingredient; and a therapeutic agent (A1) for ganglioside  
 CC GD3 associated disease, comprising C1 as an active ingredient. (I) is  
 CC useful for treating GD3 associated disease, which involves administering  
 CC (I), where the GD3 associated disease is cancer. (A1) is also useful for  
 CC treating GD3 associated disease. (II) is useful for producing (I). (I) is  
 CC useful for manufacturing a therapeutic agent for GD3 associated disease.  
 CC This sequence represents a ganglioside GD3 binding antibody associated  
 CC peptide.

XX Computer optimization of physicochemical properties of antibodies  
 PT comprises analyzing the interactions of amino acids at variable  
 PT positions.

PS Disclosure; Fig 2b; 135pp; English.

XX The present invention relates to a method for optimizing at least one  
 CC physico-chemical property of an antibody by a computational screening  
 CC method. The method comprises: receiving a template antibody structure;  
 CC selecting at least one variable position belonging to the antibody  
 CC structure; selecting at least one amino acid to be considered at the  
 CC variable position(s); analyzing the interaction of each selected amino  
 CC acid at each variable position with at least part of the remainder of the  
 CC antibody, including the selected amino acids at other variable positions;  
 CC and identifying a set of at least one antibody sequence with at least one  
 CC optimized physico-chemical property. The method is useful for optimizing  
 CC the physico-chemical properties of an antibody, especially the stability,  
 CC solubility, or antigen binding affinity. The optimized antibody may be  
 CC useful for treating a patient. The present sequence is an antibody  
 CC variable region sequence used to illustrate the invention.

XX PT New humanised antibody with specific alterations in human framework -  
 PT specifically reactive with vascular endothelial growth factor, useful for  
 PT inhibiting tumour growth.

XX PS Claim 3; Page 31; 45pp; English.

XX CC AAW86805 is the variable light region of the humanised A4.6.1 variant  
 CC hu2.10. This variant is the consensus humanised clone obtained from phage  
 CC sorting experiments. These antibodies are especially reactive with  
 CC vascular endothelial growth factor (VEGF) and are used to inhibit growth  
 CC of tumours by inhibiting mitogenic signalling

 XX New monoclonal antibody that specifically binds to human vascular  
 PT endothelial growth factor, useful for treating diseases associated with  
 PT abnormal angiogenesis such as cancer, rheumatoid arthritis, psoriasis,  
 PT diabetic retinopathy.  
 XX Claim 18; SEQ ID NO 12; 111pp; English.  
 PS The invention relates to a monoclonal antibody that specifically binds to  
 CC a human vascular endothelial growth factor (VEGF) with dissociation  
 CC constant Kd equal to or lower than 0.2 nM. The monoclonal antibody is  
 CC useful for diagnosing and treating diseases associated with abnormal  
 CC angiogenesis such as cancer, rheumatoid arthritis, ischemic-reperfusion  
 CC related brain edema and injury, cortical ischemia, ovarian hyperplasia  
 CC and hypervascularity, endometriosis, psoriasis, diabetic retinopathy, and  
 CC other ocular angiogenic diseases. The present sequence represents the  
 CC amino acid sequence of the light chain variable region of an anti-VEGF  
 CC antibody.

 PT the temperature of a composition subjected to protein A affinity  
 PT chromatography to 3-20 degrees C, where protein A leaching is reduced.  
 XX  
 PS Disclosure; SEQ ID NO 7; 27pp; English.  
 XX  
 CC The invention relates to a method of purifying a protein which comprises  
 CC a CH2/CH3 region by protein A affinity chromatography. The method  
 CC involves reducing the temperature of a composition comprising the protein  
 CC and one or more impurities subjected to protein A affinity chromatography  
 CC to 3-20 degrees Celsius, where protein A leaching is reduced. Preferably  
 CC the protein is antibody. The antibody is selected from Traatzumab,  
 CC humanized 2C4, humanized CD11a antibody, and humanized VEGF antibody.  
 CC Preferably, the antibody binds HER2 antigen, where the antibody is  
 CC Trastuzumab or humanized 2C4. The protein is an immunoadhesin,  
 CC specifically a TNF receptor immunoadhesin. The methods are useful for  
 CC purifying a protein, which comprises a CH2/CH3 region by protein A  
 CC affinity chromatography and for reducing leaching of protein A during  
 CC protein A affinity chromatography. The current sequence represents the  
 CC variable light chain amino acid sequence of VEGF.

Run on: April 6, 2006, 08:56:41 ; Search time 11 Seconds  
(without alignments)  
96.217 Million cell updates/sec

Title: US-10-089-500-6  
Perfect score: 54  
Sequence: 1 SASQDISNYLN 11

Scoring table: BLOSUM62  
Gapop 10.0 , Gapext 0.5

Searched: 283416 seqs, 96216763 residues

Total number of hits satisfying chosen parameters: 283416

Minimum DB seq length: 0

Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%  
Maximum Match 100%  
Listing first 1000 summaries

Database : PIR 80.\*

1: pir1.\*  
2: pir2.\*  
3: pir3.\*  
4: pir4.\*

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

#### SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX New human type complementation-determining region-transplanted antibody  
 PT and derivatives against ganglioside GD3, useful in diagnosis and therapy  
 PT of e.g. tumors, with low antigenicity, little side effects but potent  
 PT activity in cancer.

XX Claim 4; Page 142; 183pp; Japanese.

XX The present invention describes a monoclonal antibody which can react  
 CC specifically with ganglioside GD3. The antibody and its derivatives are  
 CC useful in the diagnosis and therapy of tumours, particularly cancer  
 CC diagnosis. The present sequence is a protein used in the exemplification

XX Drugs containing genetically-modified antibody against ganglioside GD3,  
 PT its fragment, immunocompetent cell activators or/and antitumor agents in  
 PT combination, applicable in treating malignant tumor like melanoma.

XX Claim 6; Page 99; 121pp; Japanese.

XX The invention describes drugs contain a genetically-modified antibody  
 CC against ganglioside GD3 or its fragment and at least 1 of a substance  
 CC capable of activating immunocompetent cells and a substance having an  
 CC antitumor activity in combination. The drugs can be used to treat tumour  
 CC like melanoma and can provide a treatment with enhanced therapeutic  
 CC effect and little side-reactions, particularly to relieve problems of  
 CC side-effects during the conventional single administration. This sequence  
 CC represents a peptide associated with the anti- ganglioside GD3 antibody

 XX Antibody composition for treating ganglioside GD3 associated disease e.g.  
 PT cancer, comprises genetically modified antibody molecule, which  
 PT specifically binds to ganglioside GD3 and has N-glycoside-binding sugar  
 PT chain in its Fc domain.  
 XX Claim 9; SEQ ID NO 18; 124pp; Japanese.  
 PS The invention describes an antibody composition (I), comprising a  
 CC genetically modified antibody molecule which specifically binds to  
 CC ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its  
 CC Fc domain, where the N-glycoside-binding complex sugar chain is a sugar  
 CC chain having no fucose attached to N-acetylglucosamine at the reducing  
 CC end of the sugar chain. Also described are: a transformant (II) capable  
 CC of producing (I), obtained by introducing DNA that encodes the antibody  
 CC molecule which specifically binds with ganglioside GD3, to a host cell;  
 CC producing (I), involving cultivating (I) in a culture medium, such that  
 CC C1 (sic) is produced and accumulated in the culture, extracting and  
 CC purifying C1 from the culture medium; a pharmaceutical (III) containing  
 CC C1 as an active ingredient; and a therapeutic agent (A1) for ganglioside  
 CC GD3 associated disease, comprising C1 as an active ingredient. (I) is  
 CC useful for treating GD3 associated disease, which involves administering  
 CC (I), where the GD3 associated diseases is cancer. (A1) is also useful for  
 CC treating GD3 associated disease. (II) is useful for producing (I). (I) is  
 CC useful for manufacturing a therapeutic agent for GD3 associated disease.  
 CC This sequence represents a ganglioside GD3 binding antibody associated  
 CC peptide.

PT New human type complementation-determining region-transplanted antibody  
 PT and derivatives against ganglioside GD3; useful in diagnosis and therapy  
 PT of e.g. tumors, with low antigenicity, little side effects but potent  
 PT activity in cancer.

XX Example 1; Page 143-144; 183pp; Japanese.

XX The present invention describes a monoclonal antibody which can react  
 CC specifically with ganglioside GD3. The antibody and its derivatives are  
 CC useful in the diagnosis and therapy of tumors, particularly cancer  
 CC diagnosis. The present sequence is a protein used in the exemplification  
 CC of the invention

PT Drugs containing genetically-modified antibody against ganglioside GD3,  
 PT its fragment, immunocompetent cell activators or/and antitumor agents in  
 PT combination, applicable in treating malignant tumor like melanoma.

PS Claim 8; Page 100; 121pp; Japanese.

XX The invention describes drugs contain a genetically-modified antibody  
 CC against ganglioside GD3 or its fragment and at least 1 of a substance  
 CC capable of activating immunocompetent cells and a substance having an  
 CC antitumor activity in combination. The drugs can be used to treat tumour  
 CC like melanoma and can provide a treatment with enhanced therapeutic  
 CC effect and little side-reactions, particularly to relieve problems of  
 CC side-effects during the conventional single administration. This sequence  
 CC represents a protein associated with the anti- ganglioside GD3 antibody

PT Humanised antibody specific for ganglioside GM2 - used for producing a
PT cytotoxic effect on cancers such as melanoma, neuroblastoma and glioma.
XX
PS Example 2; Page 115-116; 191pp; English.
XX
CC Example 2 describes the construction of the vector pChi641HA1 for
CC chimeric human antibody H chain expression. mRNA from mouse anti-GD3
CC monoclonal Ab KM641-producing cells was isolated and KM641 H and L chain
CC cDNAs isolated. The base sequences of the Ig variable regions in KM641 H
CC chain cDNA (pKM641HA3) and KM641 L chain cDNA (pKM641LA2) are given in
CC AA045438-39. A KM641-derived chimeric human Ab H chain expression vector
CC was constructed by joining the H chain variable region gene from
CC pKM641HA3 to a vector for chimeric human Ab H chain expression using the
CC synthetic DNAs given in AAQ63439 and AAQ63440

XX
CC This immunoglobulin region was isolated from pKM641LA2.A methionine
CC codon, presumably the initiation codon ATG, was found in the vicinity of
CC the 5' terminus and the sequence has a full length leader sequence. The
CC chimeric human antibodies are useful in the treatment of cancer,
CC especially that which is of neural ectodermal origin. In contrast to
CC prior art constructs based on mouse monoclonal antibodies, the chimeric
CC human antibodies do not cause anti-mouse immunoglobulin production. The
CC chimeric human antibodies have a prolonged half-life and a reduced
CC frequency of adverse effects when compared to mouse monoclonal antibodies

XX New humanized chimera antibody KM-871 useful for treating cancer,
XX comprises variable region of mouse monoclonal antibody, reactive with
XX ganglioside and human antibody constant region.
XX
XX Claim 14; Page 28-29; 65pp; English.
XX
XX The present sequence is a murine immunoglobulin light chain variable
XX region from plasmid KM-641. The coding sequence was used in the creation
XX of an expression vector, along with the sequence for a human antibody, to
XX produce humanised chimaeric antibodies, which can be used to treat
XX cancer. Humanised chimaeric antibodies are more effective than mouse
XX antibodies as they do not provoke a reaction in the human and side
XX effects, such as the formation of anti-mouse immunoglobulin antibody and
XX the rapid half-life of the immunoglobulins, do not occur

PT New antibody that inhibits binding of a GPR64 polypeptide to an antibody
PT comprising GPR64-18, GPR64-81, GPR64-93 or GPR64-101, useful in preparing
PT a composition for diagnosing or treating ovarian cancer.
XX
PS Example 2; SEQ ID NO 16; 75pp; English.
XX
CC This invention relates to novel antibodies that bind to the G protein
CC coupled receptor protein identified as GPR64, namely GPR64-1, GPR64-16,
CC GPR64-18, GPR64-20 and GPR64-48. Specifically, it refers to the use of
CC these anti-GPR64 antibodies as selective cytotoxic agents against GPR64
CC expressing tumour cells such as those associated with ovarian cancer,
CC uterine cancer and Ewing's sarcoma. The present invention describes
CC epitope mapping of those antibodies that show high affinity binding to
CC GPR64 through competitive binding analyses, such that the antibodies can
CC be assessed for GPR64 dependent cell death in vitro. Accordingly, they
CC can be used to develop cytostatic compositions for gene therapy or
CC immunotherapy that inhibit cellular proliferation of an ovarian cancerous
CC cell and furthermore can diagnose and inhibit growth of tumour cells.
CC This polypeptide is encoded by a light chain variable region DNA sequence
CC of a murine anti-human GPR64 antibody of the invention.

 XX New composition comprising two or more isolated polypeptides, useful for  
 PT preparing a medicament for treating pain in an animal.  
 PT  
 XX Claim 1; Page; 1017pp; English.  
 PS  
 XX The invention discloses a composition comprising two or more isolated rat  
 CC or human polynucleotides or a polynucleotide which represents a fragment,  
 CC derivative or allelic variation of the nucleic acid sequence. Also  
 CC claimed are a vector comprising the novel polynucleotide, a host cell  
 CC comprising the vector, a method for identifying a nucleotide sequence  
 CC which is differentially regulated in an animal subjected to pain and a  
 CC kit to perform the method, an array, a method for identifying an agent  
 CC that increases or decreases the expression of the polynucleotide sequence  
 CC that is differentially expressed in neuronal tissue of a first animal  
 CC subjected to pain, a method for identifying a compound which regulates  
 CC the expression of a polynucleotide sequence which is differentially  
 CC expressed in an animal subjected to pain, a method for identifying a  
 CC compound that regulates the activity of one or more of the  
 CC polynucleotides, a method for producing a pharmaceutical composition, a  
 CC method for identifying a compound or small molecule that regulates the  
 CC activity in an animal of one or more of the polypeptides given in the  
 CC specification, a method for identifying a compound useful in treating  
 CC pain and a pharmaceutical composition comprising the one or more  
 CC polypeptides or their antibodies. The polynucleotide or the compound that  
 CC modulates its activity is useful for preparing a medicament for treating  
 CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction  
 CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene  
 CC therapy). The sequence presented is a rat protein (shown in Table 2 of  
 CC the specification) which is differentially expressed during pain. Note:  
 CC The sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic form directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences.

 XX New recombinant DNA construct, useful for improving plant tolerance to  
 PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or  
 PT pests, for conferring increased resistance to plant disease, or for  
 PT improving yield.  
 PT  
 XX Claim 1; SEQ ID NO 49629; 15pp; English.  
 PS  
 XX The invention describes a recombinant DNA construct comprising a  
 CC polynucleotide consisting of a sequence encoding an amino acid sequence  
 CC available in electronic form from the US patent office at  
 CC ftp.segdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide  
 CC of the invention are also useful in physical arrays of molecules and as  
 CC plant breeding markers. The recombinant DNA construct is useful for  
 CC improving plant tolerance to cold, heat, drought, herbicides, extreme  
 CC osmotic conditions, pathogens or pests, for manipulating growth rate in  
 CC plant cells by modification of the cell cycle pathway, for conferring  
 CC increased resistance to plant disease, for producing galactomannan,  
 CC lignin or plant growth regulators, for increasing the rate of homologous  
 CC recombination in plants, for improving yield by modification of  
 CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake  
 CC or by providing improved plant growth and development under at least one  
 CC stress condition or for modifying seed oil or protein yield and/or  
 CC content. This is the amino acid sequence of a plant full length insert  
 CC polypeptide that can be used in the recombinant DNA construct of the  
 CC invention.

 DR New nucleotide sequence useful in the identification of Lactococcus  
 XX lactis and related species.  
 PT Claim 6; SEQ ID NO 2223; 2504pp; French.  
 PS The present invention is related to a Lactococcus lactis nucleotide  
 CC sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic  
 CC acid sequence is useful in the detection and/or amplification of nucleic  
 CC acid sequence, particularly to identify Lactococcus lactis or related  
 CC species. The proteins of the invention are useful for the biosynthesis or  
 CC biodegradation of a composition of interest. The invention helps research  
 CC in lactic bacteria, particularly useful in the production of yogurt and  
 CC cheese. Note: The sequence data for this patent is based on equivalent  
 CC patent WO20017734 (published 18-OCT-2001) which is available in  
 CC electronic format directly from WIPO at

 DR Vaccine against retroviral infection containing modified envelope  
 XX protein.  
 PT Claim 4; Page 31; 37pp; French.  
 PS This sequence corresponds to a mutant of amino acids 628-663 of the gp41  
 CC envelope protein of the human immunodeficiency virus type 1 (HIV-1). The  
 CC invention relates to the generation of vaccine against the effects of  
 CC infection, in humans or animals, and comprises a modified polypeptide  
 CC containing at least part of an envelope protein of a pathogenic  
 CC retrovirus. The polypeptide can enter a target cell via a membrane  
 CC receptor for a host protein. The part of the envelope protein in includes  
 CC at least a fragment of an immunodominant zone and contains at least one  
 CC amino acid that is conserved in the immunodominant zone and present in  
 CC the pathogenic retroviral strain. When unmodified, the polypeptide  
 CC induces an immune response against both the immunodominant zone and the

CC host protein, and the modified polypeptide induces such a response  
 CC against the immunodominant zone only. The vaccines are particularly used  
 CC to protect against human or feline immune deficiency viruses. The  
 CC modified polypeptide may also be used to raise specific antibodies for  
 CC treatment of retroviral infections, particularly in the early stages

 PT Obtaining vaccines for preventing pathogenic effects of a retroviral  
 PT (e.g. HIV) infection in a host comprises selecting a modified polypeptide  
 PT that induces an immune response against the immunodominant region of an  
 PT envelope protein.  
 XX

Example 3; Page 14; 17pp; English.  
 XX  
 PS The invention relates to a method of searching for and obtaining a  
 CC vaccine against pathogenic effects related to infection of an animal or  
 CC human host by a retrovirus capable of penetrating into a target cell of  
 CC the host, the target cell possessing a membrane receptor for a protein of  
 CC the host, comprising selecting as the vaccine a modified polypeptide that  
 CC induces an immune response directed against the immunodominant region of  
 CC an envelope protein and not against a protein of the host. The invention  
 CC also relates to a vaccine obtained by the method, an antibody obtained by  
 CC immunising a host with the aid of the vaccine, where the antibody  
 CC recognises the envelope protein and not the protein of the host and a  
 CC pharmaceutical composition containing the antibody. The method is useful  
 CC in obtaining vaccines for preventing the pathogenic effects related to a  
 CC retroviral (e.g. HIV or FIV) infection. This sequence represents an HIV1  
 CC glycoprotein 41 (gp41) mutant peptide used in the scope of the invention.

 CC The invention relates to identifying target proteins (ABB90790-ABB94016)  
 CC for herbicidally active compounds, comprising aligning and comparing  
 CC nucleic acid or amino acid sequences from plant with nucleic acid or  
 CC amino acid sequences from non-plant organisms using suitable search  
 CC parameters, where plant sequences having an E-value greater by a factor  
 CC of 3 than the E-value of most similar non-plant sequences are selected.  
 CC The polypeptides or nucleic acids encoding them are useful for  
 CC identifying modulators. The identified modulators are useful as  
 CC herbicides

XX
XX Nucleic acid construct for controlling cyst and root knot nematodes,
PT comprises a cyst and root knot nematode responsive promoter and
PT optionally a heterologous nucleic acid.
XX
XX Disclosure; SEQ ID NO 2; 32pp; English.
XX
XX The invention discloses a nucleic acid construct comprising, in the 5' to
CC 3' direction, a cyst and root knot nematode responsive promoter and,
CC optionally, a heterologous nucleic acid positioned downstream from the
CC promoter. The cyst and root knot nematode responsive promoter preferably
CC comprises the Nicotiana endo-1,4-beta-glucanase (EGase), Ntcel2, promoter
CC and, optionally, a heterologous nucleic acid positioned downstream from
CC the promoter and operably associated with it, where the heterologous
CC nucleic acid encodes a product disruptive of nematode attack. Also
CC claimed is a plant cell transformed with the construct making a
CC transformed plant, comprising regenerating a plant from the construct, an
CC Agrobacterium tumefaciens cell containing the construct comprising a Ti
CC plasmid, a microparticle carrying the construct, suitable for the
CC ballistic transformation of a plant cell, a plant cell protoplast
CC comprising the construct and a seed obtained from the transgenic plant.
CC The heterologous nucleic acid segment may be a gene encoding for an
CC insecticidal protein, preferably a Bacillus thuringiensis crystal protein
CC toxic to insects, but may be a product toxic to the plant cell. The
CC transgenic plant is a dicot or monocot, preferably a tobacco (Nicotiana
CC tabacum) plant. The construct is used for making a transgenic plant, such
CC as a tobacco plant, that is resistant to cyst and root knot nematodes. An
CC advantage of the invention is that two or more promoters can be daisy-
CC chained to a single structural gene. The sequence presented is the N.
CC tabacum Ntcel2 protein.

PT infections.
XX
XX Example 3; SEQ ID NO 2; 32pp; English.
XX
XX The present invention relates to a nucleic acid construct comprising, in
CC the 5' to 3' direction, a cyst and root-knot nematode responsive promoter
CC (Nicotiana Ntcel2 promoter, AEB57113), and a heterologous nucleic acid
CC positioned downstream from the promoter. The heterologous nucleic acid
CC can be a gene coding for an insecticidal protein. The nucleic acid
CC construct is useful for making a transformed plant that is resistant to
CC nematode infections. Also disclosed are endo-1,4-beta-glucanases, which
CC are found to be upregulated in cyst and root-knot nematode feeding cells.
CC The present sequence is one such endo-1,4-beta-glucanase.

XX Claim 25; SEQ ID NO 53384; 1766pp; English.  
XX  
XX The invention relates to an isolated nucleic acid comprising any one of  
CC the 6213 antisense sequences given in the specification where expression  
CC of the nucleic acid inhibits proliferation of a cell. Also included are:  
CC (1) a vector comprising a promoter operably linked to the nucleic acid  
CC encoding a polypeptide whose expression is inhibited by the antisense  
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated  
CC polypeptide or its fragment whose expression is inhibited by the  
CC antisense nucleic acid; (4) an antibody capable of specifically binding  
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular  
CC proliferation; or the activity of a gene in an operon required for  
CC proliferation; (7) identifying a compound that influences the activity of  
CC the gene product or that has an activity against a biological pathway  
CC required for proliferation, or that inhibits cellular proliferation; (8)  
CC identifying a gene required for cellular proliferation or the biological  
CC pathway in which a proliferation-required gene or its gene product lies  
CC or a gene on which the test compound that inhibits proliferation of an  
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a  
CC compound's activity; (11) a culture comprising strains in which the gene  
CC product is overexpressed or underexpressed; (12) determining the extent  
CC to which each of the strains is present in a culture or collection of  
CC strains; or (13) identifying the target of a compound that inhibits the  
CC proliferation of an organism. The antisense nucleic acids are useful for  
CC identifying proteins or screening for homologous nucleic acids required  
CC for cellular proliferation to isolate candidate molecules for rational  
CC drug discovery programs, or for screening homologous nucleic acids  
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,  
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is encoded by one of  
CC the target prokaryotic essential genes. Note: The sequence data for this  
CC patent did not form part of the printed specification, but was obtained  
CC in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences

PT biosynthesis of ganglioside and ganglioside mimics, as diagnostic  
PT reagents and as immunogen for producing antibodies.  
XX  
XX Claim 13; Page 100-101; 120pp; English.  
XX  
XX A reaction mixture for the synthesis of a sialylated oligosaccharide is  
CC useful for synthesising sialylated oligosaccharides such as ganglioside,  
CC lysoganglioside or their mimics. Glycosyltransferases are useful for  
CC chemo-enzymatic synthesis of oligosaccharides, including gangliosides and  
CC other oligosaccharides that have biological activity. The enzymes and  
CC nucleic acids that encode them are useful for studies of the pathogenesis  
CC mechanisms of organisms that synthesize ganglioside mimics, such as *C.*  
CC *jejuni* and the nucleic acids are used as probes to study expression of  
CC genes involved in ganglioside mimetic synthesis. Antibodies raised  
CC against the glycosyltransferases are also useful for analyzing the  
CC expression patterns of these genes involved in pathogenesis. The nucleic  
CC acids are also useful for designing antisense oligonucleotides for  
CC inhibiting expression of the Campylobacter enzymes that are involved in  
CC the biosynthesis of ganglioside mimics that can mask the pathogens from  
CC the host's immune system. The oligosaccharides are useful as diagnosing  
CC reagents or as therapeutics and as immunogens for producing antibodies.  
CC Bacterial glycosyltransferase can be used to catalyse the formation of  
CC oligosaccharides that are identical to the corresponding mammalian  
CC structures and are easier and less expensive to produce in large  
CC quantity, compared to the mammalian glycosyltransferase. The bacterial  
CC origin of the enzymes facilitates expression of large quantities of the  
CC enzymes using relatively inexpensive prokaryotic expression systems.

 XX  
 CC The invention comprises the amino acid and coding sequences of  
 CC Campylobacter jejuni proteins. The C. jejuni proteins of the invention  
 CC may be either an: acyltransferase; glycosyltransferase; GalNAc (N-  
 CC Acetylgalactosamine) transferase; galactosyltransferase;  
 CC sialyltransferase; sialic acid synthase; cytidine 5'-monophosphate (CMP)  
 CC sialic acid synthetase; acetyltransferase. The C. jejuni DNA and protein  
 CC sequences of the invention are useful for ganglioside synthesis, studying  
 CC ganglioside mimetics, and for designing oligonucleotides to inhibit  
 CC expression of Campylobacter enzymes involved in the biosynthesis of  
 CC ganglioside mimetics that can mask the pathogen's from the host's immune  
 CC system. The C. jejuni oligosaccharides of the invention may be used as  
 CC diagnostic reagents (e.g. to locate areas of inflammation or tumour  
 CC metastasis). The present amino acid sequence represents a Campylobacter  
 CC jejuni protein of the invention

 XX New recombinant DNA constructs useful in the field of biochemistry and  
 PT

PT genetics, and in particular for producing transgenic plants with improved  
 PT biological characteristics.

XX Claim 2; SEQ ID NO 7620; 14pp; English.

XX The invention relates a recombinant DNA construct comprising a  
 CC polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:  
 CC 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences  
 CC (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,  
 CC Arabidopsis, wheat and rape but the specification does not indicate which  
 CC sequences is derived from which organism. Also included is a method of  
 CC producing a plant having an improved property, comprising transforming a  
 CC plant with a recombinant DNA construct comprising a promoter region  
 CC functional in a plant cell operably joined to a polynucleotide encoding a  
 CC polypeptide associated with the property, and growing the transformed  
 CC plant. The property is selected from improving plant cold tolerance, for  
 CC manipulating growth rate in plant cells by modification of the cell cycle  
 CC pathway, for improving plant drought tolerance, for providing increased  
 CC resistance to plant disease, for galactomannan production, for production  
 CC of plant growth regulators, for improving plant heat tolerance, for  
 CC improving plant tolerance to herbicides, for increasing the rate of  
 CC homologous recombination in plants, for lignin production, for improving  
 CC plant tolerance to extreme osmotic conditions, for improving plant  
 CC tolerance to pathogens or pests, for yield improvement by modification of  
 CC photosynthesis, for modifying seed oil yield and/or content, for  
 CC modifying seed protein yield and/or content, for yield improvement by  
 CC modification of carbohydrate, nitrogen or phosphorus use and/or uptake  
 CC and for yield improvement by providing improved plant growth and  
 CC development under at least one stress condition. The polynucleotide may  
 CC also encode a plant transcription factor. The methods and compositions of  
 CC the present invention are useful in the field of biochemistry and  
 CC genetics, in particular for producing transgenic plants with improved  
 CC biological characteristics such as increased yield, improved nitrogen  
 CC flow, increasing plant tolerance to cold or heat, improving plant  
 CC tolerance to extreme osmotic and drought conditions, and improving plant  
 CC tolerance to plant pests or pathogens. They can also be used in physical  
 CC arrays of molecules, plant breeding markers, computer-based storage and  
 CC analysis systems. The present sequence is one of the 5544 plant protein  
 CC sequences of the invention. Note: The sequence data for this patent did  
 CC not form part of the printed specification, but was obtained in  
 CC electronic format directly from USPTO at  
 CC seqdata.uspto.gov/sequence.html?DocID=20040216190.

XX New recombinant DNA construct, useful for improving plant tolerance to  
 PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or  
 PT pests, for conferring increased resistance to plant disease, or for  
 PT improving yield.

XX Claim 1; SEQ ID NO 49028; 15pp; English.

XX The invention describes a recombinant DNA construct comprising a  
 CC polynucleotide consisting of a sequence encoding an amino acid sequence  
 CC available in electronic form from the US patent office at  
 CC ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide  
 CC of the invention are also useful in physical arrays of molecules and as  
 CC plant breeding markers. The recombinant DNA construct is useful for  
 CC improving plant tolerance to cold, heat, drought, herbicides, extreme  
 CC osmotic conditions, pathogens or pests, for manipulating growth rate in  
 CC plant cells by modification of the cell cycle pathway, for conferring  
 CC increased resistance to plant disease, for producing galactomannan,  
 CC lignin or plant growth regulators, for increasing the rate of homologous  
 CC recombination in plants, for improving yield by modification of  
 CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake  
 CC or by providing improved plant growth and development under at least one  
 CC stress condition or for modifying seed oil or protein yield and/or  
 CC content. This is the amino acid sequence of a plant full length insert  
 CC polypeptide that can be used in the recombinant DNA construct of the  
 CC invention.

 DR New recombinant DNA construct, useful for improving plant tolerance to  
 PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or  
 PT pests, for conferring increased resistance to plant disease, or for  
 PT improving yield.  
 XX Claim 1; SEQ ID NO 64369; 15pp; English.  
 PS The invention describes a recombinant DNA construct comprising a  
 CC polynucleotide consisting of a sequence encoding an amino acid sequence  
 CC available in electronic form from the US patent office at  
 CC ftp.seqdata.uspto.gov/sequence.html?docid:2004034888. The polynucleotide  
 CC of the invention are also useful in physical arrays of molecules and as  
 CC plant breeding markers. The recombinant DNA construct is useful for  
 CC improving plant tolerance to cold, heat, drought, herbicides, extreme  
 CC osmotic conditions, pathogens or pests, for manipulating growth rate in  
 CC plant cells by modification of the cell cycle pathway, for conferring  
 CC increased resistance to plant disease, for producing galactomannan,  
 CC lignin or plant growth regulators, for increasing the rate of homologous  
 CC recombination in plants, for improving yield by modification of  
 CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake  
 CC or by providing improved plant growth and development under at least one  
 CC stress condition or for modifying seed oil or protein yield and/or  
 CC content. This is the amino acid sequence of a plant full length insert  
 CC polypeptide that can be used in the recombinant DNA construct of the  
 CC invention.

 DR Polymorphic nucleic acids encoding e.g. amylases, cyclins, polymerases,  
 PT oncogenes and histones, useful for diagnosing and treating, e.g. cancer,  
 PT autoimmune diseases and infections.  
 XX Disclosure; Page 3823; 4143pp; English.  
 PS The present invention relates to oligonucleotides (see AAL26793-AAL34659)  
 CC encoding polymorphic variants of proteins related to amylases, amyloid  
 CC proteins, angiotensin, apoptosis related proteins, cadherin, cyclin,  
 CC polymerase, oncogenes, histones, kinases, colony stimulating factors,  
 CC complement related proteins, cytochromes, kinesins, cytokines,  
 CC interferons, interleukins, G-protein coupled receptors and thioesterases.  
 CC The present sequence is a peptide encoded by one such oligonucleotide.  
 CC The oligonucleotides and the peptides encoded by them may be used in the  
 CC prevention, diagnosis and treatment of diseases associated with  
 CC inappropriate expression of the proteins listed above. Disorders that may  
 CC be prevented, diagnosed and/or treated include multifactorial diseases  
 CC with a genetic component, such as autoimmune diseases (e.g. rheumatoid  
 CC arthritis, multiple sclerosis, diabetes, systemic lupus erythematosus  
 CC and Grave's disease), inflammation, cancer (e.g. cancers of the bladder,  
 CC brain, breast, colon and kidney, leukaemia), diseases of the nervous  
 CC system and an infection of pathogenic organisms

XX PT New composite binding zinc finger polypeptide, useful for designing
XX PT sequence-specific binding proteins regulating gene expression in the
XX PT fields of molecular biology, and for the diagnosis and treatment of
XX PT autoimmune disorders.
XX
XX PS Example 2; Page 93; 157pp; English.
XX
XX CC The invention relates to a composite binding polypeptide comprising a
XX CC first natural binding domain derived from a first natural binding
XX CC polypeptide and a second natural binding domain derived from a second
XX CC natural binding polypeptide, where the first and second natural binding
XX CC polypeptides may be the same or different and where the polypeptide binds
XX CC to a target differing from the natural target of both the first and
XX CC second binding polypeptides. The invention also relates to a chimeric
XX CC polypeptide comprising a binding polypeptide cited above and a biological
XX CC effector domain, a library of natural binding domains, a library of
XX CC natural zinc finger nucleic acid binding domains comprising a linker
XX CC attached to it, a method for selecting a binding polypeptide capable of
XX CC binding to a target site and a method for designing a composite binding
XX CC polypeptide. The methods and compositions of the present invention are
XX CC useful for designing sequence-specific binding proteins for regulation of
XX CC gene expression in the fields of molecular biology. They can also be used
XX CC for the diagnosis and treatment of autoimmune disorders, and as research
XX CC tools and in transgenic animals. This sequence represents a human zinc
XX CC finger DNA binding domain used in the scope of the invention

XX
XX CC The present invention describes substantially purified human proteins
XX CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1
XX CC in the specification). ABN15762 to ABN27252 encode the human ORFX
XX CC proteins given in ABP00010 to ABP11500. ORFX proteins are useful for
XX CC treating or preventing a pathology associated with an ORFX-associated
XX CC disorder in humans, and in the manufacture of a medicament for treating a
XX CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide
XX CC sequences can be used in gene therapy. ORFX sequences can be used in the
XX CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver,
XX CC psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage,
XX CC osteoarthritis, neurodegenerative disorders, diabetes mellitus, systemic
XX CC lupus erythematosus, hypertension, hypothyroidism, cholesterol ester
XX CC storage disease, various immune deficiencies and disorders, infectious
XX CC diseases, autoimmune disorders such as multiple sclerosis, rheumatoid
XX CC arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host
XX CC disease and autoimmune inflammatory eye disease. ORFX proteins are also
XX CC useful for treating burns, incisions, ulcers, for treating osteoporosis,
XX CC bone degenerative disorders, or periodontal disease, and for gut
XX CC protection or regeneration and treatment of lung or liver fibrosis,
XX CC reperfusion injury in various tissues and conditions resulting from
XX CC systemic cytokine damage. N.B. The sequence data for this patent did not
XX CC form part of the printed specification, but was obtained in electronic
XX CC format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

CC -!- FUNCTION: Inositol 5-phosphatase which acts on inositol 1,4,5-
CC triphosphate, inositol 1,3,4,5-tetrakisphosphate,
CC phosphatidylinositol 4,5-bisphosphate and phosphatidylinositol
CC 3,4,5-trisphosphate. Has 6-fold higher affinity for
CC phosphatidylinositol 4,5-bisphosphate than for inositol 1,4,5-
CC triphosphate. May negatively regulate assembly of the actin
CC cytoskeleton (By similarity).
CC -!- CATALYTIC ACTIVITY: D-myo-Inositol 1,4,5-trisphosphate + H(2)O =
CC myo-Inositol 1,4-bisphosphate + phosphate.
CC -!- SUBCELLULAR LOCATION: Endoplasmic reticulum. Following stimulation
CC with EGF, translocates to membrane ruffles (By similarity).
CC -!- SIMILARITY: Belongs to the inositol-1,4,5-trisphosphate 5-
CC phosphatase type II family.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

 PT New human type complementation-determining region-transplanted antibody  
 PT and derivatives against ganglioside GD3, useful in diagnosis and therapy  
 PT of e.g. tumors, with low antigenicity, little side effects but potent  
 PT activity in cancer.  
 XX  
 PS Claim 4; Page 142; 183pp; Japanese.  
 XX  
 CC The present invention describes a monoclonal antibody which can react  
 CC specifically with ganglioside GD3. The antibody and its derivatives are  
 CC useful in the diagnosis and therapy of tumors, particularly cancer  
 CC diagnosis. The present sequence is a protein used in the exemplification

 XX  
 CC The invention describes drugs contain a genetically-modified antibody  
 CC against ganglioside GD3 or its fragment and at least 1 of a substance  
 CC capable of activating immunocompetent cells and a substance having an  
 CC antitumor activity in combination. The drugs can be used to treat tumour  
 CC like melanoma and can provide a treatment with enhanced therapeutic  
 CC effect and little side-reactions, particularly to relieve problems of  
 CC side-effects during the conventional single administration. This sequence  
 CC represents a peptide associated with the anti- ganglioside GD3 antibody

 XX Antibody composition for treating ganglioside GD3 associated disease e.g.  
 PT cancer, comprises genetically modified antibody molecule, which  
 PT specifically binds to ganglioside GD3 and has N-glycoside-binding sugar  
 PT chain in its Fc domain.  
 XX  
 XX Claim 9; SEQ ID NO 19; 124pp; Japanese.  
 PS  
 XX The invention describes an antibody composition (I), comprising a  
 CC genetically modified antibody molecule which specifically binds to  
 CC ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its  
 CC Fc domain, where the N-glycoside-binding complex sugar chain is a sugar  
 CC chain having no fucose attached to N-acetylglucosamine at the reducing  
 CC end of the sugar chain. Also described are: a transformant (II) capable  
 CC of producing (I), obtained by introducing DNA that encodes the antibody  
 CC molecule which specifically binds with ganglioside GD3, to a host cell;  
 CC producing (I), involving cultivating (I) in a culture medium, such that  
 CC C1 (sic) is produced and accumulated in the culture, extracting and  
 CC purifying C1 from the culture medium; a pharmaceutical (III) containing  
 CC C1 as an active ingredient; and a therapeutic agent (A1) for ganglioside  
 CC GD3 associated disease, comprising C1 as an active ingredient. (I) is  
 CC useful for treating GD3 associated disease, which involves administering  
 CC (I), where the GD3 associated diseases is cancer. (A1) is also useful for  
 CC treating GD3 associated disease. (II) is useful for producing (I). (I) is  
 CC useful for manufacturing a therapeutic agent for GD3 associated disease.  
 CC This sequence represents a ganglioside GD3 binding antibody associated  
 CC peptide.

XX Antibody composition for treating ganglioside GD3 associated disease e.g.  
 PT cancer, comprises genetically modified antibody molecule, which  
 PT specifically binds to ganglioside GD3 and has N-glycoside-binding sugar  
 PT chain in its FC domain.

PS Claim 21; SEQ ID NO 24; 124pp; Japanese.

XX The invention describes an antibody composition (I), comprising a  
 CC genetically modified antibody molecule which specifically binds to  
 CC ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its  
 CC FC domain, where the N-glycoside-binding complex sugar chain is a sugar  
 CC chain having no fucose attached to N-acetylglucosamine at the reducing  
 CC end of the sugar chain. Also described are: a transformant (II) capable  
 CC of producing (I), obtained by introducing DNA that encodes the antibody  
 CC molecule which specifically binds with ganglioside GD3, to a host cell;  
 CC producing (I), involving cultivating (I) in a culture medium, such that  
 CC C1 (sic) is produced and accumulated in the culture, extracting and  
 CC purifying C1 from the culture medium; a pharmaceutical (III) containing  
 CC C1 as an active ingredient; and a therapeutic agent (A1) for ganglioside  
 CC GD3 associated disease, comprising C1 as an active ingredient. (I) is  
 CC useful for treating GD3 associated disease, which involves administering  
 CC (I), where the GD3 associated diseases is cancer. (A1) is also useful for  
 CC treating GD3 associated disease. (II) is useful for producing (I). (I) is

CC useful for manufacturing a therapeutic agent for GD3 associated disease.  
 CC This sequence represents a ganglioside GD3 binding antibody associated  
 CC protein.

XX
CC Example 2 describes the construction of the vector pChi641HA1 for
CC chimeric human antibody H chain expression. mRNA from mouse anti-GD3
CC monoclonal Ab KM641-producing cells was isolated and KM641 H and L chain
CC cDNAs isolated. The base sequences of the Ig variable regions in KM641 H
CC chain cDNA (pKM641HA3) and KM641 L chain cDNA (pKM641LA2) are given in
CC AAQ45438-39. A KM641-derived chimeric human Ab H chain expression vector
CC was constructed by joining the H chain variable region gene from
CC pKM641HA3 to a vector for chimeric human Ab H chain expression using the
CC synthetic DNAs given in AAQ63439 and AAQ63440

 XX Novel non-murine antibody that competes with monoclonal antibody RX1 for  
 PT binding to macrophage colony stimulating factor, useful for treating  
 PT hypogonadism, hypercalcemia, rickets, scurvy, homocystinuria, cancer,  
 PT osteoporosis.  
 XX Claim 21; SEQ ID NO 35; 269pp; English.  
 XX The invention describes a non-murine antibody (I) that competes with  
 CC monoclonal antibody RX1 for binding to macrophage colony stimulating  
 CC factor (M-CSF) by more than 75%, where the monoclonal antibody RX1 has  
 CC the heavy chain and light chain amino acid sequences having a fully  
 CC defined 447 amino acids (SEQ ID No. 2) and 214 amino acids (SEQ ID No. 4)  
 CC sequences given in the specification, respectively. (I) is useful for  
 CC preventing a subject afflicted with a disease that causes or contributes  
 CC to osteolysis, where the antibody effectively reduces the severity of  
 CC bone loss associated with the disease. The disease is chosen from  
 CC metabolic bone diseases associated with relatively increased osteoclast  
 CC activity, including endocrinopathies, hypercalcemia, deficiency states,  
 CC chronic diseases, and hereditary diseases, cancer, osteoporosis,  
 CC osteopetrosis, inflammation of bone associated with arthritis and  
 CC rheumatoid arthritis, periodontal disease, fibrous dysplasia, and/or  
 CC Paget's disease. (I) is useful for preventing or treating metastatic  
 CC cancer. Antibodies of the invention are useful for preventing or reducing  
 CC bone loss; osteolysis; metastatic cancer to bone and cancer. (I) is  
 CC useful for manufacturing a medicament for preventing or reducing bone  
 CC loss in a patient exhibiting osteolysis, manufacturing a medicament for  
 CC treating a patient afflicted with a disease that causes or contributes to  
 CC osteolysis, and metastatic cancer to bone in a patient suffering from  
 CC metastatic cancer, for manufacturing a medicament for treating a patient  
 CC having cancer. (I) in synergistic combination, is useful for preparing a  
 CC medicament for treating a patient exhibiting osteolysis. This is the  
 CC amino acid sequence of macrophage colony stimulating factor (M-CSF)  
 CC specific murine antibody MC-1 light chain CDR3.

 XX New antibody or its antigen-binding fragment specific to a vertebrate  
 PT high mobility group box (HMGB) A box that inhibits release of a  
 PT proinflammatory cytokine from a cell treated with HMGB protein, useful  
 PT for treating, e.g. sepsis.  
 XX Example 4; SEQ ID NO 13; 123pp; English.  
 XX The invention provides antibodies, or their antigen-binding fragments,  
 CC that bind to a vertebrate high mobility group box (HMGB) polypeptide, to  
 CC methods of detecting and/or identifying an agent that binds to an HMGB  
 CC polypeptide, methods of treating a condition in a subject characterized  
 CC by activation of an inflammatory cytokine cascade, and methods of  
 CC detecting an HMGB polypeptide in a sample. The antibody for antigen-  
 CC binding fragment) binds to a vertebrate HMGB A box but does not  
 CC specifically bind to non-A box epitopes of HMGB, and inhibits release of  
 CC a proinflammatory cytokine from a vertebrate cell treated with an HMGB

CC protein. A method of treating a condition characterized by activation of  
 CC an inflammatory cytokine cascade comprises administering an antibody of  
 CC the invention, or its antigen-binding fragment. The condition is selected  
 CC from sepsis, allograft rejection, arthritis, asthma, lupus, adult  
 CC respiratory distress syndrome, chronic obstructive pulmonary disease,  
 CC psoriasis, pancreatitis, peritonitis, burns, ischemia, Behcet's disease,  
 CC graft versus host disease, inflammatory bowel disease, multiple sclerosis  
 CC and cachexia, especially sepsis, arthritis, or lupus. The present  
 CC sequence is the protein sequence of the light chain variable region  
 CC (Vkappa) of an anti-HMGB1 monoclonal antibody produced by claimed murine  
 CC hybridoma 2E11 HMGB1 (ATCC PTA-5431). This monoclonal antibody binds a  
 CC peptide corresponding to amino acid residues 151-168 of human HMGB1  
 CC ADY85012.

XX New chimeric mouse-human antibodies - used to detect, kill and remove HIV  
 PT -1 antigen from sample.

XX Disclosure; Fig 13; 107pp; English.

XX This is the light (kappa) - chain variable (V) region of a mouse  
 CC monoclonal antibody (MAb), 1C11, and is specific for an HIV-1 viral  
 CC antigen. It is used in the construction of a chimeric MAb comprising  
 CC heavy and light chains having murine V regions and human C regions. The  
 CC chimeric MAbs are more effective than murine MAb 1C11 since they have an  
 CC increased compatibility in humans. The heavy and light chain V-regions  
 CC are joined by manipulating their respective joining (J) regions, to  
 CC generate restriction enzyme recognition sites. The chimeric MAbs can be  
 CC used as immunoconjugates, in association with e.g. toxins for HIV  
 CC treatment. They can also be used in diagnosis of HIV. See also AAQ12056-  
 CC 60 and AAQ12062-63. (Updated on 25-MAR-2003 to correct PA field.)

XX New protein comprising an immunoglobulin heavy chain variable (VH) domain

XX and an immunoglobulin light chain variable (VL) domain, useful for

XX preparing a composition for treating or preventing a cancerous disorder.

XX Disclosure; Fig 7A; 224pp; English.

XX The present invention describes a protein comprising an immunoglobulin

XX (Ig) heavy chain variable (VH) domain and an Ig light chain variable (VL)

XX domain. The protein binds a complex comprising a major histocompatibility

XX complex (MHC) and a peptide, does not substantially bind the MHC in the

XX absence of the bound peptide, and does not substantially bind the peptide

XX in the absence of the MHC. The peptide is a peptide fragment of gp100,

XX MUC1, TAX or hTERT. Also described: (1) a pharmaceutical composition

XX comprising the novel protein and a carrier; (2) a cytotoxic T cell

XX comprising one or more nucleic acids for expressing the Ig that binds a

XX complex having an MHC and a peptide, does not substantially bind the MHC

XX in the absence of the bound peptide, and does not substantially bind the

XX peptide in the absence of the MHC; (3) an isolated nucleic acid

XX comprising a first segment that encodes the Ig variable domain; (4) a

XX host cell comprising heterologous nucleic acid sequences that encodes the

XX novel protein; (5) a transgenic animal whose genome includes heterologous

XX nucleic acid sequences that encode the protein; (6) identifying the

XX protein that specifically binds the MHC-peptide complex; (7) expressing

XX an antigen-binding protein; (8) ablating or killing a target cell that

XX displays a peptide on a surface MHC molecule; (9) treating or preventing

XX a cancerous disorder in a subject; and (10) detecting an MHC-peptide

XX complex in a sample. A protein of the invention has cytostatic activity,

XX and can be used in gene therapy. The protein is useful for preparing a

XX composition for treating or preventing a cancerous disorder. The present

XX sequence represents the light chain of an antibody which binds to an MHC-

XX peptide complex where the peptide component in as peptide fragment of

XX gp100.

PF New antibody variable region of a monoclonal antibody specifically
PT binding to human tumor necrosis factor-alpha, useful as regulator for
PT controlling inflammatory cytokines in rheumatoid arthritis or for
PT treating rheumatoid arthritis.
XX
PS Claim 1; SEQ ID NO 14; 21pp; English.
XX
CC This invention relates to a novel antibody variable region of a
CC monoclonal antibody specifically binding to human tumor necrosis factor
CC (TNF)-alpha comprising at least one heavy chain variable region and a
CC light chain variable region. Specifically, it refers to a recombinant
CC vector pTK11-Hv comprising DNA encoding these heavy and light chain
CC variable regions, as well as a transformant Escherichia coli. The present
CC invention describes an antibody variable region of a monoclonal antibody
CC that specifically binds to human tumor necrosis factor-alpha, and is
CC useful as a direct or indirect regulator for controlling inflammatory
CC cytokines in rheumatoid arthritis. Accordingly, the pharmaceutical
CC compositions derived thereof are TNF-alpha modulators that exhibit
CC antiarthritic and antirheumatic activities and as such can be used for
CC treating rheumatoid arthritis. This peptide sequence is a complementarity
CC determining region of the human TNF-alpha light chain antibody protein
CC given in an exemplification of the invention.

 XX Claim 11; SEQ ID NO 4290; 2922pp; English.  
 PS  
 XX The invention relates to 2175 novel human ovarian antigens (ABP41054-  
 CC ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also  
 CC encompasses polypeptides 90% identical and polynucleotides 95% identical  
 CC to the sequences of the invention. The invention additionally relates to  
 CC recombinant vectors and host cells comprising human ovarian antigen  
 CC polynucleotides, antibodies against human ovarian antigens, and the use  
 CC of ovarian antigen polynucleotides and polypeptides in diagnosing,  
 CC treating, prognosing or preventing various ovary and/or breast-related  
 CC disorders. Such conditions include ovarian cancer and breast cancer, and  
 CC metastatic tumours of ovarian or breast origin, reproductive system  
 CC disorders (e.g., infertility, disorders of pregnancy, anovulation,  
 CC polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine  
 CC disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic  
 CC shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and  
 CC vaginitis), immune disorders (e.g. congenital and acquired  
 CC immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus),  
 CC blood-related disorders (e.g., anaemia), cardiovascular disorders,  
 CC respiratory disorders, neurological disorders, gastrointestinal disorders  
 CC and urinary system disorders. Ovarian antigen polypeptides and  
 CC polynucleotides may also be used in screening for compounds which  
 CC modulate ovarian antigen expression or activity. The polynucleotides may  
 CC further be used for gene therapy, chromosome mapping, in the  
 CC identification of individuals and in forensic analysis, and the  
 CC polypeptides may be used as food additives or to prepare antibodies  
 CC useful in disease diagnosis, drug targeting and phenotyping. The present  
 CC sequence represents a human ovarian antigen of the invention. Note: The  
 CC sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/published\_pct\_sequences

XX
XX Novel recombinant catalytic polypeptide useful for cleaving target
XX proteins or for treating or preventing cancers, comprises a human
XX antibody light chain operably joined to a heterologous antibody heavy
XX chain.
XX
XX Claim 62; SEQ ID NO 24; 92pp; English.
XX
XX The present sequence is the protein sequence of a human light chain
XX variable region (VL), denoted A26-JK1, that is preferred for use in
XX recombinant catalytic polypeptides of the invention. VL genes encoding
XX potentially catalytic variable regions were cloned by PCR from human
XX genomic DNA following analysis of the human kappa repertoire for genes
XX containing putative serine protease triads. Several genes were
XX identified, including A26. Catalytic polypeptides of the invention
XX comprise a human antibody light chain operably joined to a heterologous
XX antibody heavy chain. The light chain has a serine protease dyad and
XX endopeptidase activity, and the heavy chain has a predetermined
XX specificity for a target protein. By joining 2 heterologous human
XX antibody chains, one of which supplies the catalytic activity to
XX hydrolyse polypeptides and the other the binding specificity for a target
XX protein, the invention provides for the construction of a repertoire of
XX proteases with customised protein substrate specificities of potentially
XX unlimited number and thus makes possible the effective treatment and/or
XX prevention of any medical condition attributable to the presence or
XX overexpression of an identified protein. The invention also provides
XX nucleic acids encoding the catalytic antibodies (which can be used for
XX gene therapy), host cells, transgenic non-human animals, and methods of
XX cleaving a target protein (in vitro or in vivo) using a recombinant
XX catalytic polypeptide. It also provides a library of recombinant
XX catalytic polypeptides with altered enzymatic activity, and a method of
XX altering the enzymatic activity of the recombinant catalytic polypeptides
XX by mutating at least one complementarity determining region of the heavy
XX chain.

PT Humanizing VH and VL variable regions of an animal antibody of known
PT sequence comprises pre-selecting a series of 0 to n possible frameworks
PT acceptors of human origin or humanized antibodies.
XX
XX Disclosure; SEQ ID NO 24; 69pp; English.
XX
PS The invention describes a method of humanizing VH and VL variable regions
CC of an animal antibody of known sequence. The method comprises: if not
CC available, obtaining the crystallographic structure of the VH and VL
CC regions of the animal antibody; pre-selecting a series of 0 to n possible
CC frameworks acceptors of human origin or humanized antibodies, whose
CC structure was determined experimentally with a resolution of no less than
CC 3 angstroms, based on the highest level of homology and identity with the
CC primary sequence of the framework of the animal antibody; conducting a
CC structural comparison between the VH and VL variable regions of the
CC animal antibody and the regions VH and VL obtained, respectively and
CC calculating for each comparison the RMS, to identify the region VH and
CC the region VL of human origin with the smaller RMS; inserting in
CC appropriate position the sequences of the regions CDR of the animal
CC antibody in the human sequences identified; and if necessary, retromutate
CC one or more amino acid residues of the human VH and VL regions. Also
CC described are: a humanized animal antibody obtained by the method; an
CC anti-NGF humanized animal antibody obtainable by the method; and anti-
CC TrkA humanized antibody obtainable by the method. The method is useful
CC for humanizing VH and VL variable regions of an animal antibody of known
CC sequence. This is the amino acid sequence of the light chain variable
CC region from the murine form of antibody MNAC13.

PT Reinforcing activity of antibody e.g. antihuman Mpl antibody by coupling
PT heavy chain variable domains to light chain variable domains by linker,
PT to produce single chain polypeptide.
XX

```

PS Example 2; SEQ ID NO 28; 44pp; Japanese.

CC This invention relates to a novel method of reinforcing activity of an antibody, for example antihuman Mpl antibody. The method comprises coupling 2 or more heavy chain variable domains to 2 or more light chain variable domains by a linker to produce a single chain polypeptide, or coupling a first polypeptide having a heavy chain and light chain variable domain of an antibody and a second polypeptide having a heavy chain and light chain variable domain of an antibody by a linker. The invention may be useful for the development of compounds with a cytostatic activity acting as a stimulator of apoptosis. The method is useful for reinforcing activity of an antibody which may be useful for treating cancer. The method enables an increase in the agonistic activity of the antibody, which is highly stable. The present sequence is that of a region of a mouse protein which was used in the exemplification of the invention.

 PT Anti-Mpl antibodies including antihuman Mpl antibody and variants like genetically-engineered antihuman Mpl diabody, applicable in drug compositions for use in chemotherapy of thrombocytopenia and other diseases associated with Mpl mutation.  
 PT  
 PT  
 PS Claim 22; SEQ ID NO 163; 106pp; Japanese.

CC The invention describes an antibody is a single-chain polypeptide with TPO (thrombopoietin) receptor (Mpl)-binding activity that contains the 2 heavy-chain variable regions and 2 light-chain variable regions. Also described are: a chimeric antibody for binding with Mpl; an antibody for binding with soluble Mpl; antibodies for binding with human Mpl and monkey Mpl; antibodies with agonistic activity against human Mpl and

CC monkey Mpl; antibodies with binding activity for soluble Mpl; antibodies with TPO agonistic activity; antibodies containing a heavy-chain variable region with CDR (complementary-determinant regions 1, 2 and 3); antibodies containing a light-chain variable region with CDR 1, 2 and 3; antibodies containing heavy and light-chain variable regions with CDR 1, 2 and 3 selected from the already-specified groups in 18 combinations; antibodies containing a heavy-chain variable region with FR1, 2, 3 and 4; antibodies containing a light-chain variable region FR1, 2, 3 and 4; epitope-recognizing antibodies that can recognize the antibodies with the heavy and light-chain variable regions and amino acid sequences; antibodies that can recognize the amino acid moiety in human Mpl from positions 26-274; polynucleotides encoding these antibodies; polynucleotides hybridizable with the polynucleotides that encode the antibodies under stringent conditions and the antibodies containing by which have equivalent activity as such antibodies; vectors containing these polynucleotides; host cells carrying such polynucleotides or vectors; and drug compositions containing these antibodies. The antibodies are applicable in drug compositions for use in chemotherapy of thrombocytopenia and other diseases associated with Mpl mutation such as congenital amegakaryocytic thrombocytopenia. These antibodies can include antihuman Mpl antibody and variants like genetically-engineered antihuman Mpl diabody and (humanized) antihuman Mpl sc(Fv)2. Such antibodies are soluble to enhance binding ability. The diabody and sc(Fv)2 show high agonistic activity against antihuman Mpl antibody, such activity of which is comparable or superior to that of the natural ligand, human TPO. This sequence represents an anti-TPO antibody light chain variable region.

 PT Monoclonal antibody and its derivatives specific to high affinity tyrosine kinase receptor of nerve growth factor useful for treating and diagnosing neuropathological disorders such as pain, neuromas, TrkA

PT expressing neoplastic tumors.

XX Claim 2; Page; 33pp; English.

XX The invention relates to a murine monoclonal antibody, MNAC13, which

CC recognises the human nerve growth factor (NGF) receptor tyrosine kinase,

CC TrkA, and acts as an antagonist of NGF/TrkA binding. MNAC13 has a light

CC chain variable region (VL) as given in AAB48936, and a heavy chain

CC variable region (VH) as given in AAB48937. The invention also encompasses

CC synthetic derivatives of monoclonal antibody MNAC13, such as the single

CC chain antibody, scFvMNAC13 (AAB48934), which comprises the VL and VH

CC regions of MNAC13 in one polypeptide chain. The invention additionally

CC relates to pharmaceutical compositions comprising the antibody or

CC antibody derivatives of the invention, engineered eukaryotic cells able

CC to express the MNAC13 antibody or its derivatives, and a diagnostic

CC composition comprising the antibody or its derivatives for in vivo

CC imaging. NGF antagonist (inhibitor of binding of NGF to TrkA receptor The

CC MNAC13 monoclonal antibody and its derivatives are useful for treating

CC neurological pathologies such as acute or chronic pain, neuromas, and

CC TrkA-expressing neoplastic tumours. A composition comprising MNAC13 or

CC its derivatives with a diagnostically acceptable carrier is useful for in

CC vivo imaging diagnostics. The present sequence represents the light chain

CC variable region of the anti-TrkA murine monoclonal antibody MNAC13. Note:

CC The present sequence is derived from that of the single chain antibody

CC scFvMNAC13 shown on pages 32-33 and the information given in claim 2

PT resulting due to variant receptor such as congenital non-megakaryocyte

PT thrombocytopenia.

XX

PS Example 4; SEQ ID NO 8; 132pp; Japanese.

XX The invention relates to a novel ligand (preferably an antibody) (1)

CC having agonist activity with respect to a variant receptor. A ligand of

CC the invention has antidiabetic, haemostatic, and endocrine-gen. activity.

CC The ligand is useful for treating the disease caused due to variant

CC receptor, which involves combining the ligand/antibody with the variant

CC receptor, where the disease is congenital non-megakaryocyte

CC thrombocytopenia. A ligand of the invention is useful for transmitting a

CC signal to a variant receptor, which involves combining the variant

CC receptor with the ligand. The invention is useful for treating diseases

CC resulting due to variation receptor, such as type II diabetes and laron

CC syndrome. The ligand enables signal transduction function of

CC thrombopoietin, with respect to variant receptor. The present sequence is

CC used in the exemplification of the invention.

XX PT Novel ligand having agonist activity with respect to variant receptor  
 PT e.g., variant thrombopoietin receptor, useful for treating disease  
 PT resulting due to variant receptor such as congenital non-megakaryocyte  
 PT thrombocytopenia.

XX PS Disclosure; SEQ ID NO 14; 132pp; Japanese.

XX CC The invention relates to a novel ligand (preferably an antibody) (I)  
 CC having agonist activity with respect to a variant receptor. A ligand of  
 CC the invention has antidiabetic, haemostatic and endocrine-gen. activity.  
 CC The ligand is useful for treating the disease caused due to variant  
 CC receptor, which involves combining the ligand/antibody with the variant  
 CC receptor, where the disease is congenital non-megakaryocyte  
 CC thrombocytopenia. A ligand of the invention is useful for transmitting a  
 CC signal to a variant receptor, which involves combining the variant  
 CC receptor with the ligand. The invention is useful for treating diseases  
 CC resulting due to variation receptor, such as type II diabetes and laron  
 CC syndrome. The ligand enables signal transduction function of  
 CC thrombopoietin, with respect to variant receptor. The present sequence is

CC used in the exemplification of the invention.

XX PT New hybrid antigens comprising an antigenic domain and improved heat  
 PT shock protein-binding domains, useful for preventing or treating  
 PT infectious diseases or cancer.

XX PS Disclosure; SEQ ID NO 1159; 56pp; English.

XX CC This invention relates to a novel hybrid antigen which comprises at least  
 CC one antigenic domain of an infectious agent or tumour antigen and a  
 CC binding domain that non-covalently binds to a heat shock protein. The  
 CC invention may be useful for the production of compounds with an  
 CC antimicrobial or cytostatic activity. In addition, the invention may  
 CC prove useful for the production of a vaccine or for gene therapy. The  
 CC composition and methods disclosed are useful for preventing or treating  
 CC infectious diseases or cancer. The present sequence is that of a heat  
 CC shock protein binding domain peptide which was used in the  
 CC exemplification of the invention.

XX
XX Hybrid antigen useful for treating an infectious disease or cancer,
XX comprises an antigenic domain from the infectious agent or cancer joined
XX to a heat shock protein binding domain through an improved linker
XX peptide.
XX
XX Disclosure; SEQ ID NO 1159; 99pp; English.
XX
XX The invention relates to hybrid antigens comprising at least one
XX antigenic domain of an infectious agent or tumour antigen, at least one
XX binding domain that non-covalently binds to a heat shock protein (hep),
XX and at least one peptide linker between them. Also disclosed are: (a) a
XX composition for inducing an immune response to an infectious agent or
XX tumour antigen comprising at least one of the hybrid antigens or a
XX complex of at least one heat shock protein and at least one of the hybrid
XX antigens, (b) a method for inducing an immune response to an infectious
XX agent or tumour antigen by administering a hybrid antigen and a heat
XX shock protein, where the hybrid antigen and the heat shock protein are
XX non-covalently bound, and (c) treating an infectious disease or cancer by
XX administering a hybrid antigen and a heat shock protein. The heat shock
XX protein is preferably hep70. The composition is administered via oral or
XX parenteral route. The hybrid antigen is useful in preparing a composition
XX for treating or preventing cancer or infectious disease. The new peptide
XX linkers give the antigens improved activity. Note: Many of the SEQ ID Nos
XX are replicated more than once in the specification but the sequences of
XX these replicated SEQ ID Nos are not the same. This sequence represents a
XX heat shock protein binding sequence.

CC -1- CATALYTIC ACTIVITY: An acylcholine + H(2)O = choline + a
carboxylate.
CC -1- SUBUNIT: Homotetramer. The tetramer is composed of two dimers. The
two subunits in a dimer are linked by a disulfide bond.
CC -1- TISSUE SPECIFICITY: Present in most cells except erythrocytes.
CC -1- MISCELLANEOUS: Cholinesterase is highly reactive with
organophosphate esters.
CC -1- SIMILARITY: Belongs to the type-B carboxylesterase/lipase family.

CC -I- FUNCTION: Required for the insertion of integral membrane proteins  
CC into the mitochondrial inner membrane. Essential for the activity  
CC and assembly of cytochrome c oxidase. Plays a central role in the  
CC translocation and export of the N-terminal part of the COX2  
CC protein into the mitochondrial intermembrane space.  
CC -I- SUBUNIT: Interacts with the large ribosome subunit of  
CC mitochondrial ribosome. Interacts directly with MRP20.  
CC -I- SUBCELLULAR LOCATION: Integral membrane protein. Mitochondria;  
CC inner membrane.  
CC -I- SIMILARITY: Belongs to the OXA1/oxaA family.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

PT Drugs containing genetically-modified antibody against ganglioside GD3,  
 its fragment, immunocompetent cell activators or/and antitumor agents in  
 PT combination, applicable in treating malignant tumor like melanoma.  
 XX  
 PS Claim 8; Page 99; 121pp; Japanese.  
 XX

CC The invention describes drugs contain a genetically-modified antibody  
 against ganglioside GD3 or its fragment and at least 1 of a substance  
 CC capable of activating immunocompetent cells and a substance having an  
 CC antitumor activity in combination. The drugs can be used to treat tumour  
 CC like melanoma and can provide a treatment with enhanced therapeutic  
 CC effect and little side-reactions, particularly to relieve problems of  
 CC side-effects during the conventional single administration. This sequence  
 CC represents a protein associated with the anti- ganglioside GD3 antibody

PT Antibody composition for treating ganglioside GD3 associated disease e.g.  
 cancer, comprises genetically modified antibody molecule, which  
 PT specifically binds to ganglioside GD3 and has N-glycoside-binding sugar  
 PT chain in its Fc domain.  
 XX  
 PS Claim 24; SEQ ID NO 25; 124pp; Japanese.  
 XX

CC The invention describes an antibody composition (I), comprising a  
 CC genetically modified antibody molecule which specifically binds to  
 CC ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its  
 CC Fc domain, where the N-glycoside-binding complex sugar chain is a sugar  
 CC chain having no fucose attached to N-acetylglucosamine at the reducing  
 CC end of the sugar chain. Also described are: a transformant (II) capable  
 CC of producing (I), obtained by introducing DNA that encodes the antibody  
 CC molecule which specifically binds with ganglioside GD3, to a host cell;  
 CC producing (I), involving cultivating (I) in a culture medium, such that  
 CC Cl (sic) is produced and accumulated in the culture, extracting and  
 CC purifying Cl from the culture medium; a pharmaceutical (III) containing  
 CC Cl as an active ingredient; and a therapeutic agent (A1) for ganglioside  
 CC GD3 associated disease, comprising Cl as an active ingredient. (I) is  
 CC useful for treating GD3 associated disease, which involves administering  
 CC (I), where the GD3 associated disease is cancer. (A1) is also useful for  
 CC treating GD3 associated disease. (II) is useful for producing (I). (I) is  
 CC useful for manufacturing a therapeutic agent for GD3 associated disease.  
 CC This sequence represents a ganglioside GD3 binding antibody associated  
 CC protein.

XX Antibody composition for treating ganglioside GD3 associated disease e.g.  
PT cancer, comprises genetically modified antibody molecule, which  
PT specifically binds to ganglioside GD3 and has N-glycoside-binding sugar  
PT chain in its FC domain.  
XX  
PS Claim 13; SEQ ID NO 20; 124pp; Japanese.  
XX  
XX The invention describes an antibody composition (I), comprising a  
CC genetically modified antibody molecule which specifically binds to  
CC ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its  
CC FC domain, where the N-glycoside-binding complex sugar chain is a sugar  
CC chain having no fucose attached to N-acetylglucosamine at the reducing  
CC end of the sugar chain. Also described are: a transformant (II) capable  
CC of producing (I), obtained by introducing DNA that encodes the antibody  
CC molecule which specifically binds with ganglioside GD3, to a host cell;  
CC producing (I), involving cultivating (I) in a culture medium, such that  
CC CI (sic) is produced and accumulated in the culture, extracting and  
CC purifying CI from the culture medium; a pharmaceutical (III) containing  
CC CI as an active ingredient; and a therapeutic agent (A1) for ganglioside  
CC GD3 associated disease, comprising CI as an active ingredient. (I) is  
CC useful for treating GD3 associated disease, which involves administering

 PT cytotoxic effect on cancers such as melanoma, neuroblastoma and glioma.  
 XX  
 XX Example 2; Page 116-117; 191pp; English.

XX Example 2 describes the construction of the vector pChi641HA1 for  
 CC chimeric human antibody H chain expression. mRNA from mouse anti-GD3  
 CC monoclonal Ab KM641-producing cells was isolated and KM641 H and L chain  
 CC cDNAs isolated. The base sequences of the Ig variable regions in KM641 H  
 CC chain cDNA (pKM641HA3) and KM641 L chain cDNA (pKM641LA2) are given in  
 CC AAQ45438-39. A KM641-derived chimeric human Ab H chain expression vector  
 CC was constructed by joining the H chain variable region gene from  
 CC pKM641HA3 to a vector for chimeric human Ab H chain expression using the  
 CC synthetic DNAs given in AAQ63439 and AAQ63440

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Antibody composition for treating ganglioside GD3 associated disease e.g. cancer, comprises genetically modified antibody molecule, which specifically binds to ganglioside GD3 and has N-glycoside-binding sugar chain in its Fc domain.

PS Claim 21; SEQ ID NO 24; 124pp; Japanese.

XX The invention describes an antibody composition (I), comprising a genetically modified antibody molecule which specifically binds to ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its Fc domain, where the N-glycoside-binding complex sugar chain is a sugar chain having no fucose attached to N-acetylglucosamine at the reducing end of the sugar chain. Also described are: a transformant (II) capable of producing (I), obtained by introducing DNA that encodes the antibody molecule which specifically binds with ganglioside GD3, to a host cell; producing (I), involving cultivating (I) in a culture medium, such that Cl (sic) is produced and accumulated in the culture, extracting and purifying Cl from the culture medium; a pharmaceutical (III) containing Cl as an active ingredient; and a therapeutic agent (A1) for ganglioside GD3 associated disease, comprising Cl as an active ingredient. (I) is useful for treating GD3 associated disease, which involves administering (I), where the GD3 associated disease is cancer. (A1) is also useful for treating GD3 associated disease. (II) is useful for producing (I). (I) is useful for manufacturing a therapeutic agent for GD3 associated disease. This sequence represents a ganglioside GD3 binding antibody associated protein.

 PT Antibody composition for treating ganglioside GD3 associated disease e.g.  
 PT cancer, comprises genetically modified antibody molecule, which  
 PT specifically binds to ganglioside GD3 and has N-glycoside-binding sugar

PT chain in its Fc domain.  
 XX  
 PS Claim 20; SEQ ID NO 23; 124pp; Japanese.  
 XX  
 CC The invention describes an antibody composition (I), comprising a  
 CC genetically modified antibody molecule which specifically binds to  
 CC ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its  
 CC Fc domain, where the N-glycoside-binding complex sugar chain is a sugar  
 CC chain having no fucose attached to N-acetylglucosamine at the reducing  
 CC end of the sugar chain. Also described are: a transformant (II) capable  
 CC of producing (I), obtained by introducing DNA that encodes the antibody  
 CC molecule which specifically binds with ganglioside GD3, to a host cell;  
 CC producing (I), involving cultivating (I) in a culture medium, such that  
 CC C1 (sic) is produced and accumulated in the culture, extracting and  
 CC purifying C1 from the culture medium; a pharmaceutical (III) containing  
 CC C1 as an active ingredient; and a therapeutic agent (A1) for ganglioside  
 CC GD3 associated disease, comprising C1 as an active ingredient. (I) is  
 CC useful for treating GD3 associated disease, which involves administering  
 CC (I), where the GD3 associated disease is cancer. (A1) is also useful for  
 CC treating GD3 associated disease. (II) is useful for producing (I). (I) is  
 CC useful for manufacturing a therapeutic agent for GD3 associated disease.  
 CC This sequence represents a ganglioside GD3 binding antibody associated  
 CC protein.

XX Drugs containing genetically-modified antibody against ganglioside GD3,
XX its fragment, immunocompetent cell activators or/and antitumor agents in
XX combination, applicable in treating malignant tumor like melanoma.
XX PS Claim 8; Page 100; 121pp; Japanese.
XX
XX The invention describes drugs contain a genetically-modified antibody
XX against ganglioside GD3 or its fragment and at least 1 of a substance
XX capable of activating immunocompetent cells and a substance having an
XX antitumor activity in combination. The drugs can be used to treat tumour
XX like melanoma and can provide a treatment with enhanced therapeutic
XX effect and little side-reactions, particularly to relieve problems of
XX side-effects during the conventional single administration. This sequence
XX represents a protein associated with the anti- ganglioside GD3 antibody

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New human type complementation-determining region-transplanted antibody and derivatives against ganglioside GD3, useful in diagnosis and therapy of e.g. tumors, with low antigenicity, little side effects but potent activity in cancer.  
XX  
XX Claim 41; Page 168-172; 183pp; Japanese.  
XX  
XX The present invention describes a monoclonal antibody which can react specifically with ganglioside GD3. The antibody and its derivatives are useful in the diagnosis and therapy of tumours, particularly cancer diagnosis. The present sequence is a protein used in the exemplification of the invention

PT	New internalizing human binding molecules capable of specifically binding
PT	to CD72, useful for diagnosing and/or treating B-cell associated
PT	diseases, such as cancer or autoimmune disorders.
XX	
PS	Claim 69; SEQ ID NO 38; 174pp; English.
XX	
CC	The present sequence is the protein sequence of the heavy chain of human
CC	IgG1 antibody 004, which specifically recognises human B cell associated
CC	antigen CD72. An ecFv ADR23320 selected from an antibody phage display
CC	library was shown to specifically recognise the human CD72 receptor. The
CC	scFv was cloned in IgG expression vector C01 using primers designed to
CC	restore complete human frameworks, thereby generating antibody 004. Such
CC	anti-CD72 immunoglobulins or their antigen-binding fragments can be used
CC	as internalising human binding molecules of the invention. These
CC	internalising human binding molecules are capable of (specifically)
CC	binding to CD72 or its antigenic determinant, and preferably bind to CD72
CC	associated with cells. Upon binding to CD72 present on the surface of
CC	target cells, the binding molecules internalise. In addition to the
CC	internalising human binding molecules, the invention provides
CC	immunoconjugates comprising an internalising human binding molecule and a
CC	tag (toxic substance, radioactive substance, liposome and/or enzyme),
CC	nucleic acids encoding these, and compositions comprising them. The
CC	internalising human binding molecule, immunoconjugate, nucleic acid
CC	molecule or composition can be used in the diagnosis and/or treatment of
CC	a B cell associated disorder or disease, especially a B cell associated
CC	cancer and B cell associated autoimmune disorder (claimed). An
CC	internalising human binding molecule comprising the present heavy chain
CC	sequence is specifically claimed.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Antibody composition for treating ganglioside GD3 associated disease e.g.  
PT cancer, comprises genetically modified antibody molecule, which  
PT specifically binds to ganglioside GD3 and has N-glycoside-binding sugar  
PT chain in its Fc domain.

XX Claim 25; SEQ ID NO 27; 124pp; Japanese.

XX The invention describes an antibody composition (I), comprising a  
CC genetically modified antibody molecule which specifically binds to  
CC ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its  
CC Fc domain, where the N-glycoside-binding complex sugar chain is a sugar  
CC chain having no fucose attached to N-acetylglucosamine at the reducing  
CC end of the sugar chain. Also described are: a transformant (II) capable  
CC of producing (I), obtained by introducing DNA that encodes the antibody  
CC molecule which specifically binds with ganglioside GD3, to a host cell;  
CC producing (I), involving cultivating (I) in a culture medium, such that  
CC C1 (sic) is produced and accumulated in the culture, extracting and  
CC purifying C1 from the culture medium; a pharmaceutical (III) containing  
CC C1 as an active ingredient; and a therapeutic agent (A1) for ganglioside  
CC GD3 associated disease, comprising C1 as an active ingredient. (I) is  
CC useful for treating GD3 associated disease, which involves administering  
CC (I), where the GD3 associated disease is cancer. (A1) is also useful for  
CC treating GD3 associated disease. (II) is useful for producing (I). (I) is  
CC useful for manufacturing a therapeutic agent for GD3 associated disease.  
CC This sequence represents a ganglioside GD3 binding antibody associated  
CC protein.

XX Drugs containing genetically-modified antibody against ganglioside GD3,
XX its fragment, immunocompetent cell activators or/and antitumor agents in
XX combination, applicable in treating malignant tumor like melanoma.
XX
XX Claim 8; Page 100; 121pp; Japanese.
XX
XX The invention describes drugs contain a genetically-modified antibody
XX against ganglioside GD3 or its fragment and at least 1 of a substance
XX capable of activating immunocompetent cells and a substance having an
XX antitumor activity in combination. The drugs can be used to treat tumour
XX like melanoma and can provide a treatment with enhanced therapeutic
XX effect and little side-reactions, particularly to relieve problems of
XX side-effects during the conventional single administration. This sequence
XX represents a protein associated with the anti- ganglioside GD3 antibody

PT chain in its Fc domain.  
 XX  
 PS Claim 25; SEQ ID NO 26; 124pp; Japanese.  
 XX  
 CC The invention describes an antibody composition (I), comprising a  
 CC genetically modified antibody molecule which specifically binds to  
 CC ganglioside GD3 and has an N-glycoside-binding complex sugar chain in its  
 CC Fc domain, where the N-glycoside-binding complex sugar chain is a sugar  
 CC chain having no fucose attached to N-acetylglucosamine at the reducing  
 CC end of the sugar chain. Also described are: a transformant (II) capable  
 CC of producing (I), obtained by introducing DNA that encodes the antibody  
 CC molecule which specifically binds with ganglioside GD3, to a host cell;  
 CC producing (I), involving cultivating (I) in a culture medium, such that  
 CC C1 (sic) is produced and accumulated in the culture, extracting and  
 CC purifying C1 from the culture medium; a pharmaceutical (III) containing  
 CC C1 as an active ingredient; and a therapeutic agent (A1) for ganglioside  
 CC GD3 associated disease, comprising C1 as an active ingredient. (I) is  
 CC useful for treating GD3 associated disease, which involves administering  
 CC (I), where the GD3 associated disease is cancer. (A1) is also useful for  
 CC treating GD3 associated disease. (II) is useful for producing (I). (I) is  
 CC useful for manufacturing a therapeutic agent for GD3 associated disease.  
 CC This sequence represents a ganglioside GD3 binding antibody associated  
 CC protein.

 XX  
 PT New human type complementation-determining region-transplanted antibody  
 PT and derivatives against ganglioside GD3, useful in diagnosis and therapy  
 PT of e.g. tumors, with low antigenicity, little side effects but potent  
 PT activity in cancer.  
 XX  
 PS Example 1; Page 150-151; 183pp; Japanese.  
 XX  
 CC The present invention describes a monoclonal antibody which can react  
 CC specifically with ganglioside GD3. The antibody and its derivatives are  
 CC useful in the diagnosis and therapy of tumors, particularly cancer  
 CC diagnosis. The present sequence is a protein used in the exemplification  
 CC of the invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
